Construction Management Services For Amtrak NJHSRIP Metuchen Frequency Converter Project

Amtrak is making major improvements in a section of the Northeast Corridor (NEC) within the State of New Jersey through the New Jersey High Speed Rail Improvement Program (NJHSRIP). Amtrak was awarded a grant through a co-operative agreement with the FRA. The grant started in October 2011 and is expected to end in June 2017. The NJHSRIP improvements are multi-disciplinary, multi-system in nature and include track improvements, increased power supply, renewal of the overhead contact system, construction of new interlockings, the installation of redundant signal power, and new signalization.

AG's scope of work shall be to provide all necessary labor, materials, tools, equipment and expenses required to perform construction management and inspection services for the project. The services shall include any necessary construction management, inspection, testing, and other services required to administer and manage the project and will be performed as per the direction of AECOM Construction Manager.
