

NYCSCA New Public School 268Q

New construction of a 93,625 sq. ft. PS 268, Queens, NY. Comprehensive mechanical, electrical, plumbing design and construction phase services. This is a 7-story structure (including the cellar and two -story mechanical penthouse). The major outdoor spaces are for the Early Childhood Playground at grade, plus a rooftop play area. The services included the design of HVAC and fire alarm systems; electrical distribution and power control; lighting; security and telephone systems; telecommunications and intercom systems.

This was a fast track project and AG performed services directly to the builder. Due to space constraints, the utilities had to be located together in a very small area. The challenge of the design was to incorporate all of the necessary elements of the MEP design.

Location:

Queens, NY

Owner:

NYCSCA

Services Provided:

Mechanical

Electrical

Plumbing

Fire Protection
