

NYCSCA Public School 22 Renovations

This school was built in the sixties and required extensive renovation. The school is a three-storied structure with a basement where the electrical and boiler rooms are located. AG carried out an extensive survey of the building and submitted a report of findings to the SCA for review and approval. After the approval, AG provided MEP design services for the facility upgrade. Electrical work included fire alarm, sound and public address system, master clock and clock system and power. A complete new climatic control system was designed along with miscellaneous associated plumbing work.
