TBTA Comprehensive Tunnel Inspection and Design for Project QM-40 Tunnel Leak Control at the Queens Midtown Tunnel

Scope of work includes comprehensive inspection of the Queens Midtown Tunnel to determine the operational conditions of specific electrical/mechanical systems. AGCE will inspect tunnel and plaza lighting including tower lighting, control systems and pumps and determine if the system conforms with A.N.S.I., I.E.S. tunnel lighting or other applicable industry standards. Analyze the system and make recommendations for improvements. AG will document all findings, create/update the QMT inspection/condition database and develop recommendations for correcting any deficiencies found.
