

A.G. Consulting Engineering, P.C., an award winning and innovative multidisciplinary construction management and engineering consulting firm, currently has an immediate position for a NYS Certified Code Compliance Officer to support a long term infrastructure project in Mineola, NY.

Overview

Under minimal direction, develops, investigates, monitors, and evaluates work in the area of construction to ensure safe design, operation and working conditions on agency sites. The Code compliance officer will be responsible prior to construction to verify that the plans are up to engineering code standards. During construction, may focus on structural integrity and fire safety. Will examine the electrical components, such as the wiring, lighting, air conditioning, and appliances. Similarly, the plumbing, used either for drinking water or for waste disposal, must meet certain regulations. In dealing with public work projects like highways, bridges, or rail, compliance must be in strict accordance with local, state, and federal codes

Compliance officers conduct their jobs primarily through visual inspection, but they may also use equipment like survey instruments or tape measures. They must document all of their findings with both photographs and written reports; therefore, code compliance officers generally use a laptop computer on site.

When problems arise, compliance officers contact the appropriate party and allow time for alterations to achieve minimum code standards. If codes are not met within the time allotted, a stop-work order is issued that halts the project until codes are met. The officer must approve the work before construction can begin again.

Responsibilities Assists in developing and establishing policies, procedures, programs and standards for construction activities for rail transportation systems. Assists in developing and implementing construction safety programs, including plans, procedures and manuals, for rail transportation system safety design, construction, testing, reviews and operations. Directs all interdepartmental task forces and committees relating to construction activities and represents the client with contractors and outside agencies. Prepares and presents written and oral reports to management, outside agencies, and the public. Establishes and implements construction and facility site Hazard Identification and Resolution process. Oversees safety hazard analyses. Reports unacceptable hazards and ensures follow-up with closure of hazards. Responsible for investigating and preparing reports of employee injuries. Coordinates consultants' work affecting construction safety. Develops and implements emergency preparedness programs for site safety. Negotiates mutual aid agreements with public safety forces to assist employees in emergency safety responses. Assists other safety department staff members with duties as necessary or when

requested by the department manager.

Qualifications Any combination of education and experience equivalent to a bachelor's degree with a minimum of approximately seven years' experience in construction code compliance management, three of which are at the senior level in construction safety. Knowledge of New York State Code of Regulations is required. Current certification as a NYS Certified Code Compliance Officer or the ability to obtain such certification upon employment.

NYS Certified code compliance officer preferred.

Willing to be based full time in Mineola, NY for the duration of the project (5 years)

Minimum years construction experience

Knowledge of: Theories, principles, and practices of general industry safety, construction safety, fire/life safety and program management.

Applicable local, state, and federal laws, rules, and regulations governing safety and environmental compliance.

Knowledge of construction when working in proximity to LIRR Operations

Knowledge of Federal Railroad Administration Roadway Worker Safety Regulations and industry safety standards (i.e. OSHA) is preferred.

Ability to: Plan, organize and direct the safety aspects of agency employees involved in construction projects.

Analyze situations, identify problems, recommend solutions, and evaluate outcomes.

Understand, interpret, and apply laws, rules, regulations, policies, procedures, contracts, budgets, and labor/management agreements.

Compile, analyze, and interpret complex data.

Represent the client before the public.
