

PANYNJ EWR Electric Vehicle Charging Stations

Electrical engineering services

AG performed electrical design work for the electric vehicle charging stations at five parking spaces grade level of the P4 Parking Garage at Newark Airport. The task required modifications to existing electrical distribution equipment in the west electrical room, addition of new equipment in that room, conduit and wiring runs to the charging stations, and installation details.

Port Authority standard specifications were used; however a specification for electric vehicle charging stations has not been developed by the Port Authority. In place of a standard specification, the AG team created a specification on the drawings.

AG remained on-hand to assist through pre-construction.

Location:
Newark, NJ

Owner:
PANYNJ

Services Provided:
Electrical
